## Enhancing Integration Of Municipal Services And Housing Products For Saudi Cities

### Vision

---

Excellence In Providing Municipal Services, Achieving Urban Sustainability In All Regions Of The Kingdom, And Organizing And Facilitating A Balanced And Sustainable Housing Environment

### Message

---

Improving The Quality Of Life And Prosperity In Saudi Cities To Respond To The Aspirations And Needs Of Current And Future Generations And Achieve The Happiness Of The Residents

# Inspection before Pega "MCP"

1

## Inconsistent Processes

Different municipalities followed varying inspection protocols, making it difficult to ensure consistency and compare data.

2

## Lack of Visibility

The fragmented approach hindered the ministry's ability to track progress and identify areas for improvement.

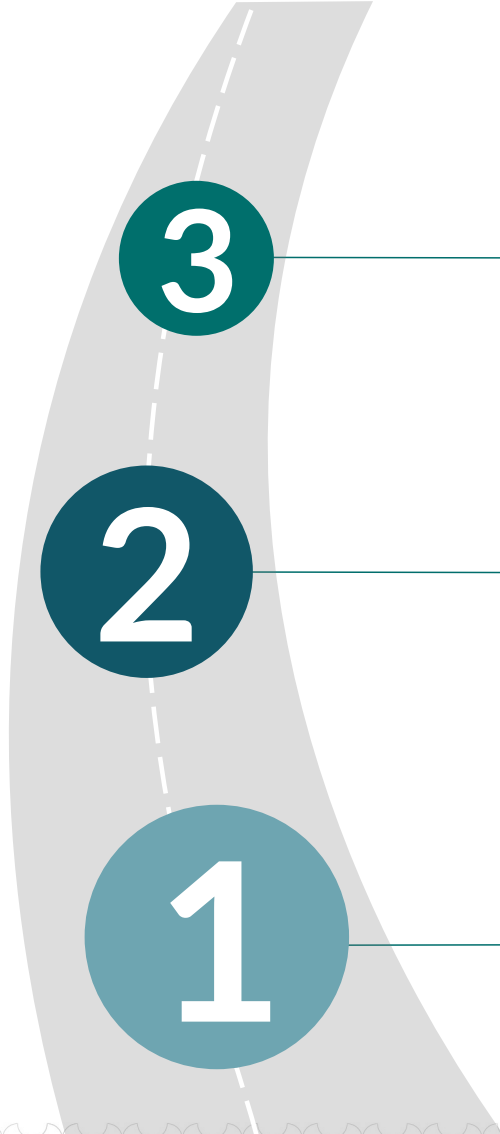

3

## Resource Intensive

Managing multiple inspection processes was both time and cost-intensive for the ministry.

# Road to Excellence with Pega & Aaseya

**GOAL:**  
Provide a Unified  
Inspection System across  
the entire  
Kingdom of Saudi Arabia

## End to end Inspections

More than 13 inspections types supporting adhoc, periodic, campaign, mission and follow-ups triggers.

## Unified Integrated Platform

Seamless connectivity with external systems like Licensing, GIS, Objections, and Payments.

## Streamlined Workflows

Automated case management, routing, and SLA tracking.

# Results and Impact of Momtathel

## Governance Improvements

Enhancing city cleanliness, urban planning, and essential service delivery.

## Resident Safety

Enforcing rules and regulations to maintain environmental health and safety.

## Inception to Delivery

Aaseya's end-to-end delivery, from design to implementation of highly scalable solutions.

# Pega and Aaseya: Architects of Innovation in Smart Inspection System

**GOAL:**  
Smart technologies will be applied to all types of Inspections

## Data Analysis

AI-powered heatmaps and case distribution optimize inspector workloads.

## AI Engines and Emerging Technologies

Created and Integrated with Pega: Computer Vision, Case Clustering, Violator Detection, Case Prioritisation and License Plate Recognition

## Enhanced Monitoring Techniques

Inspection Mediums: Dashcam, Mobile applications  
– Balady Lens, Drones, Satellite and Security cameras

## Crowdsourcing

Leveraging public participation to gather widespread data, enhancing the efficiency and coverage of regulatory compliance and quality control.

# Shaping Smarter Cities: The Next-Gen City Management System with Pega

**GOAL:**  
Centralised application for  
the management and  
operation of cities

10

## Fully Integrated Solution

Integrated with Pega Smart Inspections, Pega CRM and all existing and future Smart City Solutions. Ultimate Solution allowing any city to become a smart city.

9

## GIS Integration

All city assets are mapped on GIS and linked to contracts, contractors, and operational plans.

8

## Municipal Operation Business Management

City operations are streamlined through mapping, supervision, and management of contracts, contractors, and plans, with a focus on linking complaints to actionable oversight and field implementation.

# What is Sellafield?

[Click here to return to the Contents Page](#)

# Sellafield Ltd

# **SEMS programme**

# SEMS Drivers

The SEMS Programme was established based on two key drivers (see below), which in turn shape its overarching mission. The SEMS Programme enables a number of benefits through the ECDV's.

Two Key Drivers

Resolution of issues across the Sellafield Ltd. Management System

Enabling effective delivery of business performance, changes and benefits

**Our Mission is to:** *“Deliver a cohesive management system which enables us to perform with pride, passion and at pace by connecting people, systems and processes”*

The SEMS Programme will **deliver...**

Opportunities to **maximise value, cost efficiencies and risk mitigation.**

**Simplified and standardised ways of working.**

A **‘golden thread’ of compliance built in to all processes.**

**Greater clarity on roles and responsibilities.**

An **improved end user experience.**

Increased **procedural use and adherence**

... and **enable:**

**Significant Benefits**

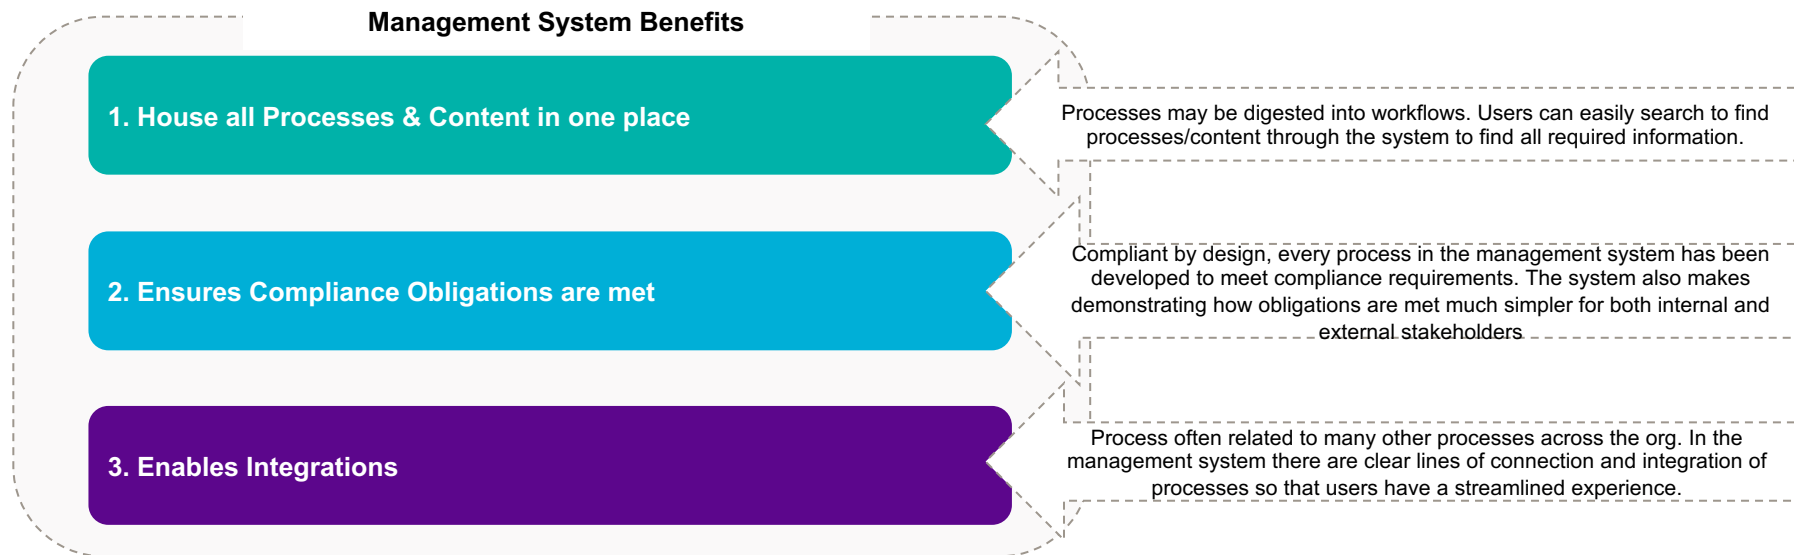

# The Management System

# Why does Sellafield need a Management System?

The Management System ensures Sellafield can meet their objectives in the most efficient manner possible

- Running an efficient and effective organisation that achieves its goal of decommissioning nuclear waste within a set budget each financial year
- Ensuring all activities carried out by staff are compliant to all relevant legislation in the UK, especially activities with nuclear safety impacts

# What does SEMS contain?

## Static documentation

Static documentation represents any type of 'paper' documentation. In the current SLMS there are several document types: Charter (SLC), Form (SLF), Manuals & Plans (SLM), Policy (SLCP), Practice (SLP), Supporting Practise (SLSP). These documents are used to provide and capture information about processes and procedures. In SEMS, some documentation will be turned into workflows and others will be kept as static documentation.

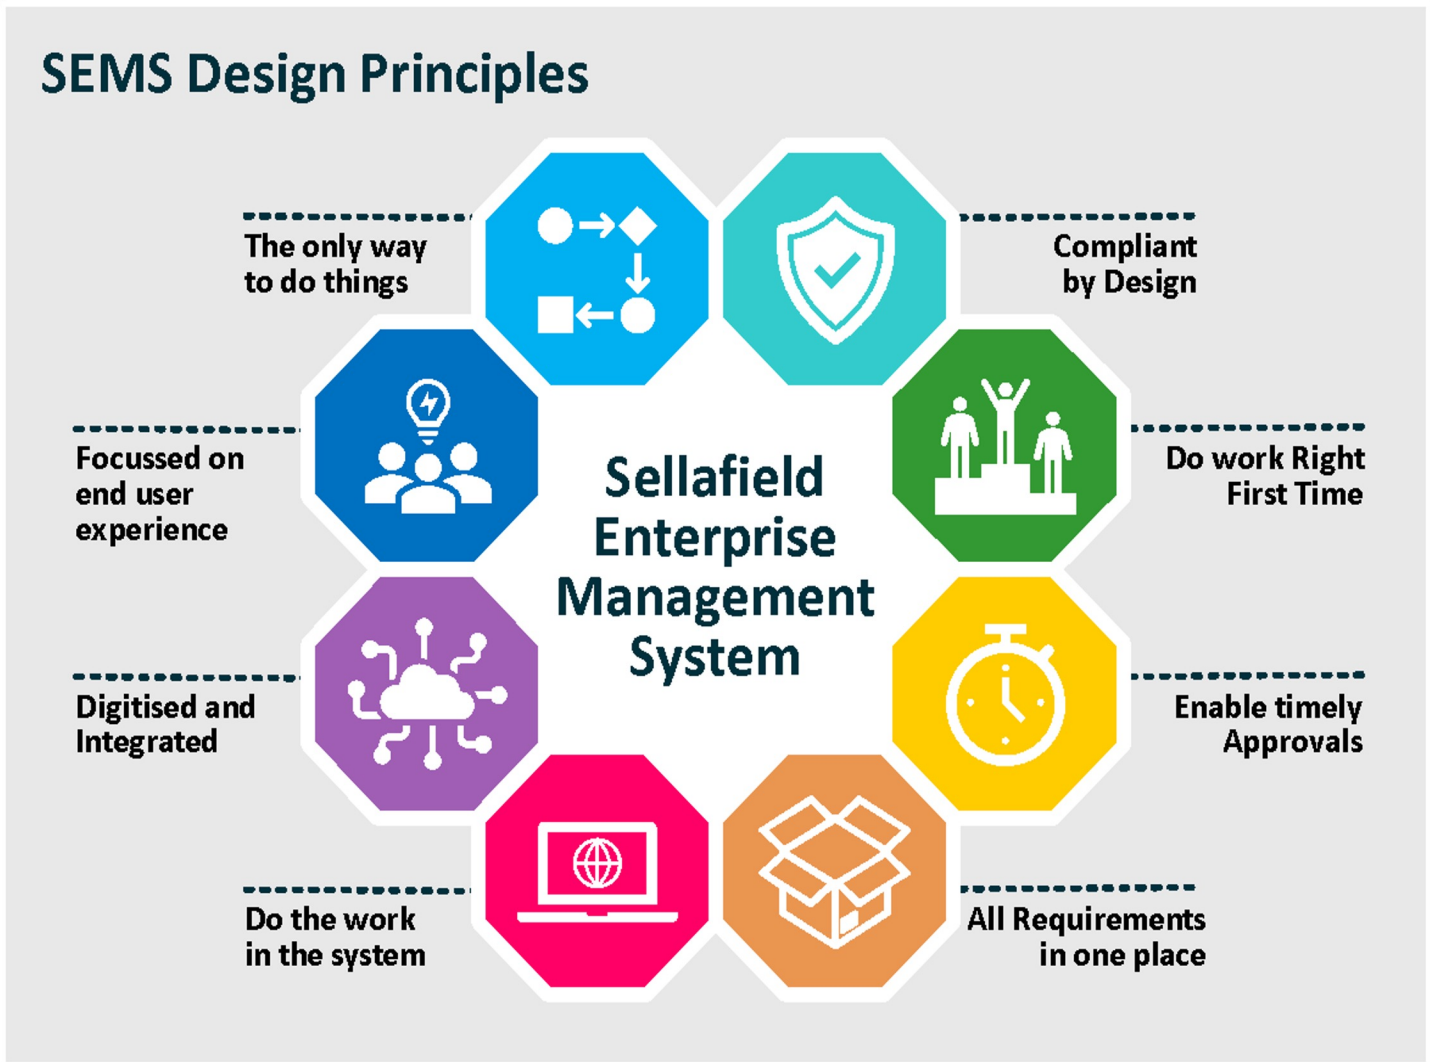

## Workflows

Workflows are digital processes, where a previously static process has been converted into a step-by-step workflow that guides the user intelligently.

At the most simple level these processes will capture information from the end user and then guide them down a pathway of steps based on the answers/content they have provided.

# Overview of our delivery process

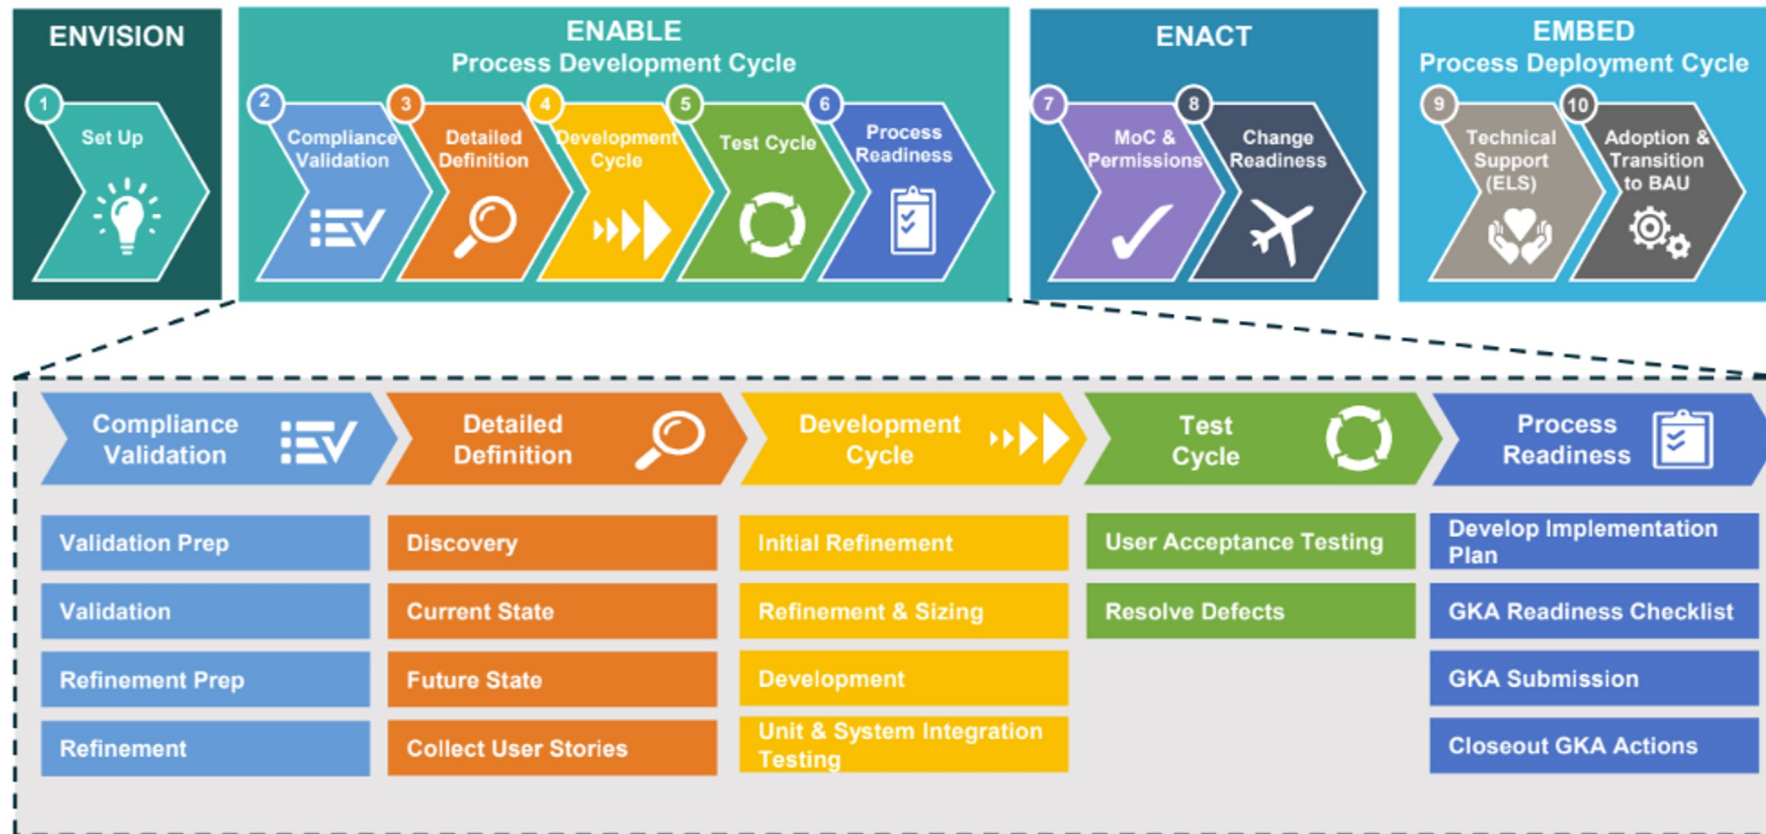

# SEMS Design Principles

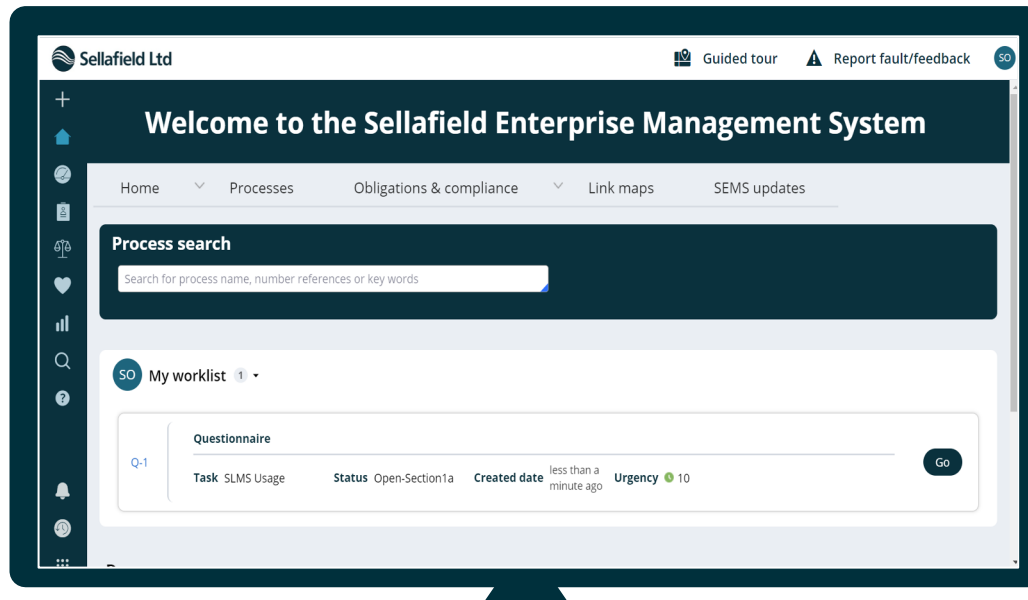

# Toolset Activities

The Toolset team are responsible for all elements of the management system build, including; ensuring the management system is compliant by design, reengineering processes into digitised workflows, developing the physical system and testing with users to iterate and remove bugs. The breakdown of key activity is shown below:

# SEMS Early System Access Success

All Sellafield internal end users had the opportunity to experience SEMS before it was launched. The aim was to build awareness and confidence with SEMS ahead of Go-Live:

- 1 Access the system via the access link provided
- 2 Step through the Guided Tour
- 3 Explore the homepage and the new features
- 4 Explore the new architecture and find processes you use
- 5 Set up your Favourite Processes
- 6 Find a document
- 7 Complete the Questionnaire in My worklist
- 8 Explore the help page
- 9 Raise any issues you experienced as a Fault or Feedback

# Transition Journey to SEMS

- Transition between the existing management system and the new SEMS will be executed in a phased, progressive and controlled manner over a 5–6-year period
